Core Competencies

At Random Bit, we serve our clients' needs by building relationships, understanding their strategic goals, and developing innovative solutions for large scale system modernization or business process re-engineering projects. We promote a culture of integrity, honesty, and accountability as we deliver world-class services in the following areas:

- Strategic Planning
- Enterprise Architecture
- Solutions Architecture
- System implementation oversight
- Enterprise data integration
- Master data management
- Data visualization
- Process Development and Improvement
- Cloud strategy realization
- Data center redesign

Past Performance

Enterprise and Solution Architecture – Architect the transition from decades-old mainframe systems to cutting-edge hybrid cloud-based architecture.

Strategic Planning – Define the strategic plan and conceptual architecture for incremental modernization of a very complex Medicaid ecosystem.

Eligibility Productivity Staffing Model Project – Improved operational efficiency of staff allowing for better care of Medicaid beneficiaries.

Solution Delivery Lifecycle Framework – Provided the governance structure that enabled the organization to turn strategic business goals into successful IT projects.

Differentiators

Deep Experience - Our employees average over 25 years of experience in their respective fields.

Vast Knowledge – Our employees possess nearly two dozen different professional certifications across each of our core competencies and more.

Tool, Technology and Process Agnostic – We have the experience and expertise necessary to develop and implement solutions across a multitude of platforms and tools using a variety of industry-leading methodologies.

Accelerators – We have tool, technology, and process accelerators that can be leveraged by our clients to quickly add value.

Featured Clients

- South Carolina Department of Health & Human Services (SCDHHS)
- New York State Department of Health (NYSDOH)
